

**Melting Point**

-249°C

Boiling Point

-246°C

Density0.0009 g/cm³**Appearance**

Neon is colorless.

Other Physical Properties

Neon glows when a high electrical voltage is passed through it.

Chemical Properties

Neon does not form compounds with other substances and is odorless.

Compounds**Uses**

Neon is used in neon signs.

Notes

Neon is the fourth most abundant element in the universe and the fifth most abundant gas in air. It is obtained from air by distillation of liquid air.
